ENERGY EFFICIENCY - BUILDINGS		
Event	Prospective analysis	Suggested actions
On 4 November [REDACTED] presented the H2020 PreMa project with a Seminar on: "Renewable solutions: looking to 2050".	This approach can be used to exploit economies of scale offered by the EU, if you want to organize events that are linked to an awarded EU project or simply to a highly topical issue, as well as to use the " Suggest an event " service of the European Commission to advertise your events.	<ol style="list-style-type: none"> 1. Plan your events on a European scale to present projects, ideas, reflections, to involve existing and future partners and take advantage of the audience offered by the EU, also useful for corporate branding. 2. Access the Commission's "Suggest an Event" service to promote your own events. The event will also be announced by other European event promotion services, <u>as well as any ad hoc advertising plans to be negotiated.</u>

<p>INVESTMENTS</p> <p>EIB and Spain's GMP Property Socimi join forces to promote investments in energy-sustainable buildings in Madrid, with the aim of reducing energy consumption and CO2 emissions</p>	<p>A financial instrument for European Strategic Investments (EFSI) is operating, which is the main pillar of the Investment Plan in Europe.</p> <p>With the guarantees provided by the EFSI Fund, the European Investment Bank is financing and offering guarantees for a projects within Horizon 2020, on energy efficiency. The operation was also deemed suitable for the contribution it makes to the economy in this pandemic phase (such as the 110% Super bonus in Italy and other countries, which will also be financed with the Recovery Fund).</p> <p>EFSI will soon be replaced by the InvestEU Fund (2021-2027), which will continue to offer equity, guarantee and risk sharing instruments with an endowment of € 75 billion, part of which will be added by the Recovery Fund in September. All this should mobilize € 650 billion of public and private investments.</p> <p>EP will approve Invest EU Instrument during its Plenary session on 9 March 2021. Watch the recording of the debate</p>	<p>To be kept in mind as a suitable tool to finance projects for energy efficiency, the reduction of consumption and the recovery and reuse of CO2, with a view to the profitability of investments by public and private companies.</p> <p>The Regulation, proposed in 2018, has been negotiated between EP and EU Council last December.</p> <p>The European Parliament has the Rapporteurs MEP FEBIAN (P) representing the Budget Committee and MEP IREMOND (D) in the Internal Market Committee and voted at first reading Resolution and amendments to the Proposal for a Regulation on 11 November 2020, proposing € 91.7 billion.</p> <p>On 7 December 2020, Parliament and the Council negotiated an amount of € 26.1 billion, with which it is expected to mobilize investments of € 372 billion.</p> <p>The Regulation will be definitively adopted on 9 March 2021.</p> <p>For details on application of the Regulation, we stand by for any suggestions on possible lobby.</p> <div data-bbox="1066 1608 1377 1744" style="background-color: #0056b3; color: white; padding: 5px; text-align: center; margin: 10px 0;"> <p>List of EUInvest criteria for financing</p> </div>
		<p>Request for follow-up</p>

<p>Finance a green revolution with green mortgages</p> <p>The EU funded a pilot program that involved 65 banks to design soft loans as a means of leveraging the necessary funds.</p> <p>The EU has set ambitious targets on climate change. The amount of investments necessary to achieve the energy saving objectives alone is estimated at 180 billion euros per year, three quarters of which are represented by energy efficiency in buildings.</p> <p>The old EeMAP Project was closed in April 2019 and proved the validity of "energy efficiency mortgages".</p> <p>In September 2020, the new EeMMiP project of H2020 funded by the EU with € 1.5 M, for the implementation plan of the mortgage market for energy supply, started and will end in 2023.</p> <p><u>These are the projects on the topic:</u></p> <p>EeMAP - Action plan on mortgages for energy efficiency (2017-2019)</p> <p>EeDaPP - Protocol and data portal on energy efficiency (2018 - 8/2020)</p> <p>EeMMiP - Energy Efficient Mortgages Market Implementation Plan (9/2020 - 8/2022)</p>	<p>There are 200 million houses in Europe and most of them were built before 2001.</p> <p>These are responsible for 40% of the EU's energy consumption.</p> <p>The EU wants to invest in research, data collection, benchmarking and investment promotion to achieve the ambitious energy saving targets.</p> <p>The EU believes that EEMs (Energy Efficient Mortgages) can finance the purchase, construction and renovation of residential and commercial buildings with the aim of improving energy performance.</p> <p>Of the various European EeXXX projects, the EeMMiP project, also funded by the EU, will explore the link between buildings and mortgages and bridge the development gap in the energy efficiency mortgage market.</p> <p>Specifically, the project will define a model for established and emerging markets.</p> <p>It will establish market-based governance and the rating of energy efficiency mortgages aimed at supporting recognition and trust and will facilitate access to quality information for market participants.</p>	<p><u>Take a look</u> at the description of the projects and the participants to prepare for new possible EU initiatives on mortgages for the energy efficiency of buildings.</p> <p>The project leader is the Covered bond & mortgage Council of Brussels, which has 120 members. Here is the list</p> <p><u>We suggest</u> to monitor the results of EeMMiP, the EU initiatives that could arise and the projects that will be supported by Horizon Europe (2021-2027). <u>Then, we suggest to take action on possible initiatives.</u></p>
		<p>Request of monitoring</p>

Event	Prospective analysis	Suggested actions
<p><u>Public Consultation</u></p> <p>Consultation involving all stakeholders in view of the revision of the EU Directive on energy efficiency, scheduled for spring 2021.</p> <p>This is Directive Directive 2012/27/EU (select the <u>current consolidated version</u>) with elements revised in 2021.</p> <p>Period for sending comments 17 November 2020 - 09 February 2021 (midnight Brussels time).</p> <p>The first consultation closed on 09/21/2020 and saw the sending of 189 feedbacks.</p>	<p>This Directive will be adapted to the new targets for the reduction of greenhouse gas emissions. In fact, the European Green Deal now indicates that the reductions must be at least 50-55% by 2030.</p> <p>By changing the objectives, the Directive will have to provide indications on how to achieve them.</p> <ol style="list-style-type: none"> 1. Taking part in this consultation can be useful for two reasons: 2. Influence the requirements and implementation paths of the new Directive <p>Be part of the debate on the European Green Deal, also useful for participation in future EU Commission initiatives</p>	<p>If [REDACTED] Inc. wants to take part in this Consultation, like any other EU consultation it must first register the Company in the EU Transparency Register.</p> <p>Later, once you have received the your identification ID, you can access the Consultation page, respond to a questionnaire, answering the questions and your motivations and suggestions.</p> <p><u>As soon as we receive your agreement, we take action.</u></p>
